

Lifting Beam

Safety

Maximum strength with hard wood and steel construction. The Battery Lift will withstand the most rigorous conditions. The natural insulation of wood prevents battery damage through accidental short circuits. This quality engineered lifting device is a safety must for today's multi-shift electric truck user.

Economy

Maximum economy through low cost and continuing saving in man-power. The unique spring loaded adjusting bar permits a one man battery handling operation.

Usability

Maximum usability with adjustable battery hooks which provide a simple method of handling different size batteries.

Portability

Maximum portability is obtained through the natural lightness of the hardwood construction. Moving this lift from one location to another is no problem.

Durability

Maximum life is obtained through the use of treated hardwood and properly designed steel hooks.

Specifications

Adjustable

Model	Adjustable	Maximum Capacity
122	21-39"	6000

Non-Adjustable

Model	Maximum	Maximum Capacity
255	39"	6000

Special battery lifts available upon request.

Can be shipped completely assembled via UPS.

Meets OSHA standards.
